3. Page Description (Guideline)	5
4. Detailed Login Information	6
5. Main Page Description	7-12
6. Sub Page Description	13-19
7. Paid Content	20
8. In-App Ad	21
[Appendix] Test procedure and remote keys	22-23

1. Basic Information

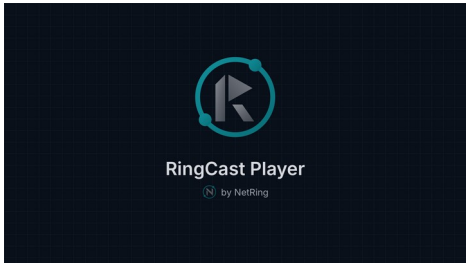

Category	Items	Input (By Developer)
App Information	**App Title**	RingCast Player (App ID com.netringtech.ringcast)
	Category	Life (business signage)
	File Type	Web (webOS web app, packaged as .ipk)
	Optimized Resolution	1920*1080
	Service Area Information	U.S.A
	App Service Language	English, Spanish (the app follows the TV's language setting)
	Geo-IP Block	No
	SDK Version	webOS (webOS TV 5.0 and later)
	In-App Ad	Not Applicable
	Paid Content	Not Applicable
	Sound (For Game Type)	Not a game. The app has no sounds of its own; videos from the signage server play muted by default.
Test Information	**Service URL (For Web Type)**	Not applicable: the app is packaged (.ipk). It shows content from the signage server the user enters on the TV.
	Test URL	https://signage.netringtech.com Our test RingCast Manager server for QA (online 24 hours a day during the review). Test account: section 4.
	Service Platform	webOS

Notes

- The app needs a RingCast Manager signage server, which a business runs for itself. For QA, use our test server above: no setup on your side.
- No account, sign-in, payment or advertising inside the app. The only sign-in is to the server's dashboard, in a web browser, to add the TV (section 4).

2. Document History

No.	Sent	Version	File Name	Contents
1	05.10.2026	1.0.0	RingCast-Player-UX-Scenario-1.0.0.pdf	Initial document (text only)
2	29.10.2026	1.0.0	RingCast-Player-UX-Scenario-1.0.0-r2.pdf	Rewritten on the UX Scenario template 4.4: basic information, a real image of every screen with numbered UI elements, flow chart, remote keys and the full test procedure (QA issue QA2026100824184)

3. Page Description (Guideline)

1. How this document describes each page

Description	
1	Each page shows a real screenshot of the app (1920x1080)
2	Red numbers mark each UI element or button; the table at the right describes it
3	Rows marked “Keys” list what the remote keys do on that page
Pages of the app	
5-1	Server address (first start)
5-2	Wrong address
5-3	Pairing code
5-4	Add the TV in the dashboard (PC browser)
5-5	Screen added
5-6	Main page: playing
6	Sub pages 6-2 to 6-7: change server, connecting, messages, offline, Spanish

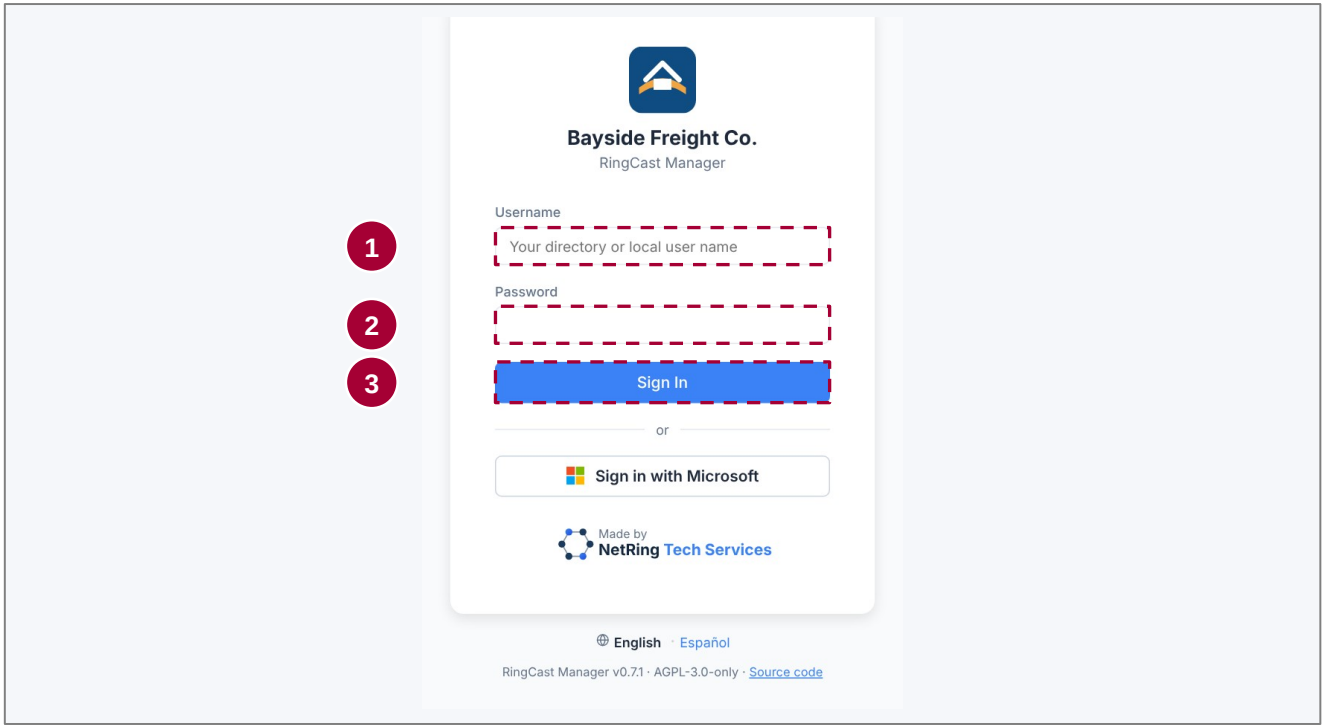

Detailed Information

- The picture above is the app's splash screen (webOS shows it at launch). Then the app shows one of its pages; there are no menus, lists or settings screens.
- Set-up is done once: enter the server address (5-1), the TV shows a pairing code (5-3), an administrator adds the TV in the server's dashboard in a web browser (5-4). From then on the app only plays the server's content full screen (5-6), also after the TV is turned off and on.
- Remote: arrows, OK, BACK, BLUE, EXIT, HOME and the Magic Remote pointer. Colour keys other than BLUE and the number keys do nothing in the app. The full key table is in the Appendix.

**Note: the test procedure step by step is on the Appendix pages.*

4. Detailed Login Information

1. Sign-in to the signage server's dashboard (in a web browser, not on the TV)

Description	
1	Input field for the user name (ID)
2	Input field for the password
3	“Sign In” button
Test Accounts (ID / PW)	
1	ID (LGtest) / PW (as entered in Seller Lounge > Test Info, test account)
Activation Codes	
–	None. The TV shows its own pairing code (page 5-3), entered in the dashboard (page 5-4)

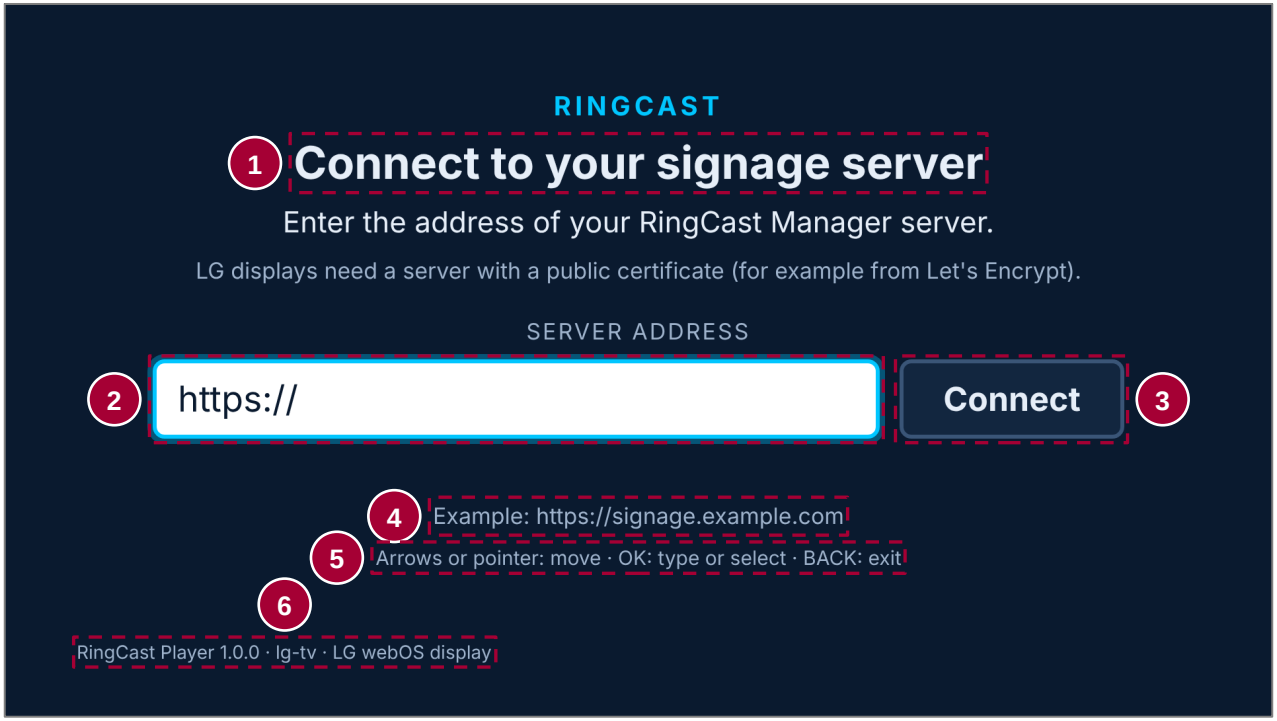

Detailed Information

- There is no login on the TV: the app itself has no account, ID or password.
- To add the TV, sign in to the test server's dashboard at https://signage.netringtech.com in any web browser on a PC or phone, with the test account above.
- One test account is enough: it can add any number of TVs, from any number of devices at the same time. The dashboard shows the TVs that were added; to test again from the start, remove the TV there (Appendix, step 8).

**Note: the dashboard picture comes from a demo server; the test server's dashboard looks the same, with its own name and logo.*

5. Main Page Description

1. Start Page: server address (first start)

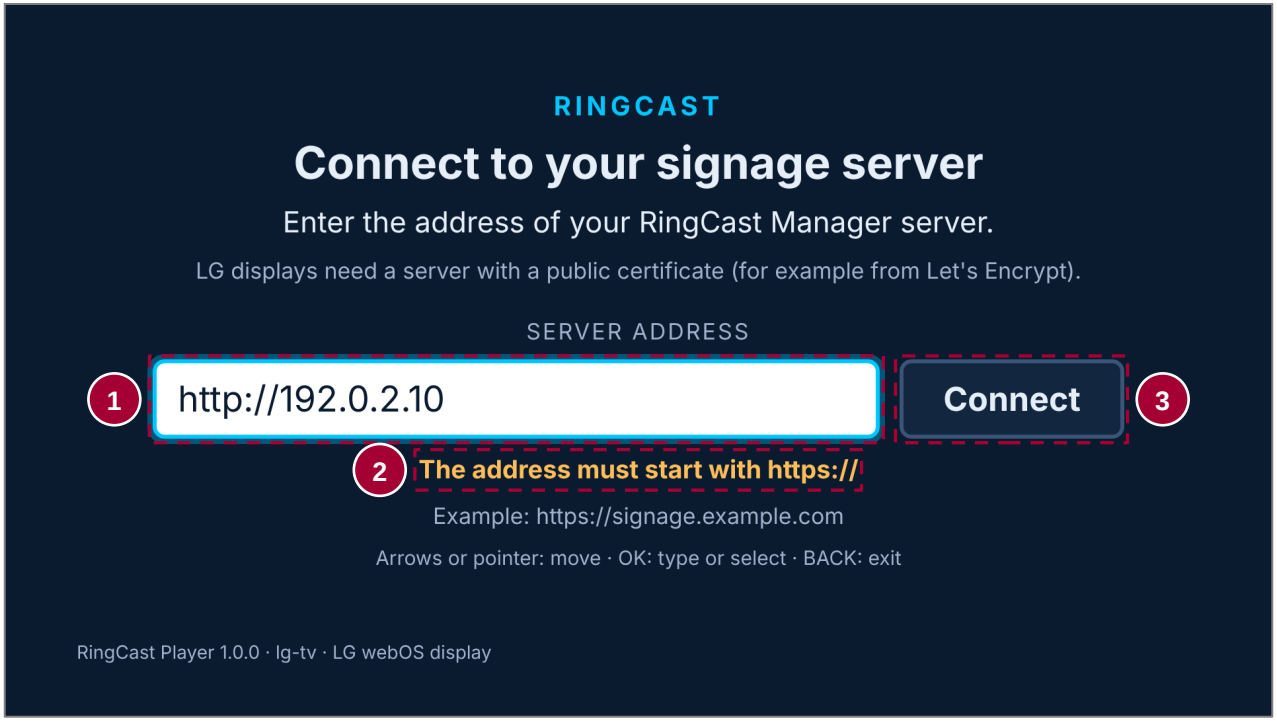

Description	
1	Page title: “Connect to your signage server”
2	Server address field, pre-filled with “https://”. Has the focus at start; OK opens the TV's on-screen keyboard
3	“Connect” button: checks the address and goes on to the pairing code (5-3)
4	Example of an address
5	Key hint for this page
6	App version, platform and TV model (information only)
Keys	
OK	On ②: keyboard. On ③: connect
Arrows	DOWN/RIGHT: ② → ③. UP/LEFT: ③ → ②
BACK	Leaves the app (this is its first page)

Detailed Information

- Type the test server's address: the field must read https://signage.netringtech.com (type “signage.netringtech.com” after the “https://” already there). Select “Done” on the on-screen keyboard: the keyboard closes and ③ Connect gets the focus. Press OK.
- With the Magic Remote, the control under the pointer gets the focus (cyan ring) and OK clicks it. OK over an empty area does nothing.
- While the address is checked the app shows “Connecting…” (6-3). A wrong address is explained under the field (5-2).

5. Main Page Description

2. Wrong address: the reason is shown under the field

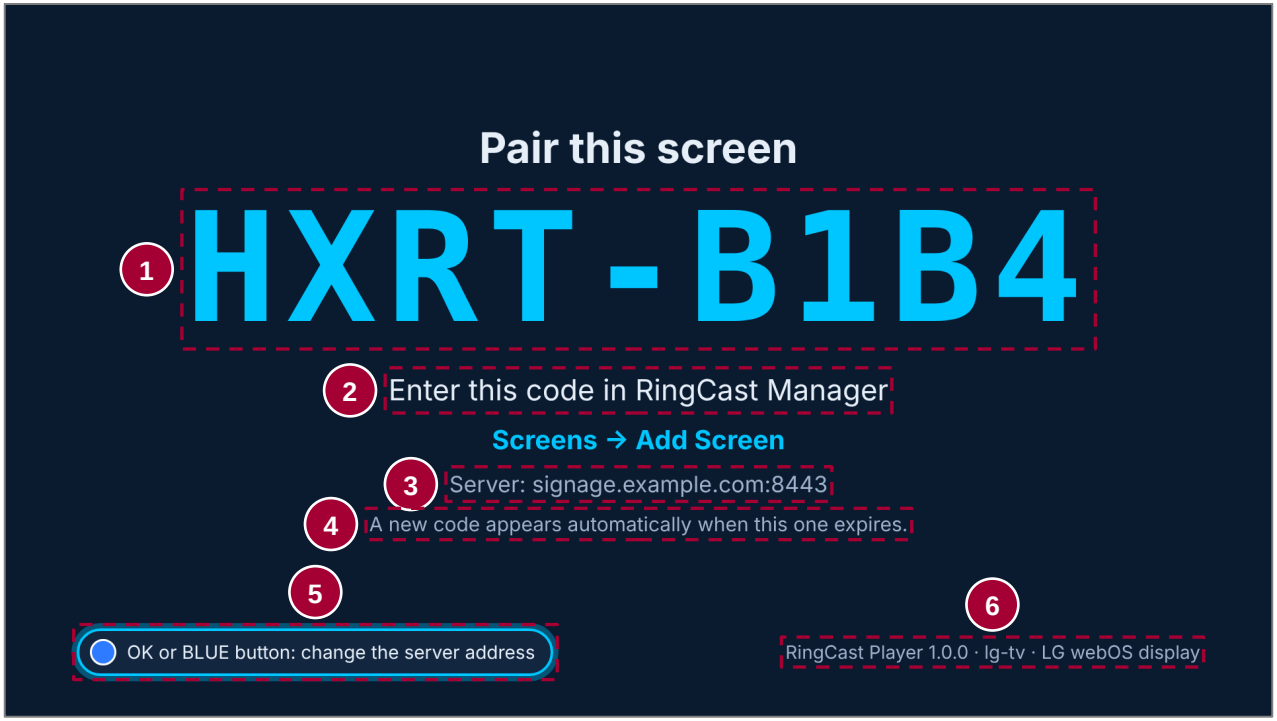

Description	
1	The address as entered (here: http://192.0.2.10)
2	Why it can't be used, in plain words
3	“Connect”: try again after correcting the address
Keys	
OK / Arrows	Same as 5-1
BACK	Leaves the app

Detailed Information

- Messages the app can show here: the address must start with https:// · an IP address or local name can't be used (LG TVs need a server with a public certificate) · the server can't be reached or its certificate isn't trusted · the address isn't a signage server.
- The focus stays on the page: correct the address in ① and press Connect again. Nothing is saved until a server answers.
- To test it: enter http://example.com or 192.1.0.00, then the right address https://signage.netringtech.com.

5. Main Page Description

3. Pairing code

Description	
1	Pairing code of this TV (a new one each time, for example HXRT-B1B4)
2	Where to enter it: RingCast Manager (the server's dashboard), Screens → Add Screen
3	The server this TV is connected to
4	A new code appears by itself when this one expires
5	Button “change the server address” (has the focus): opens 6-2
6	App version, platform and TV model
Keys	
OK / BLUE	Change the server address (6-2)
BACK	Leaves the app; the next start comes back here

Detailed Information

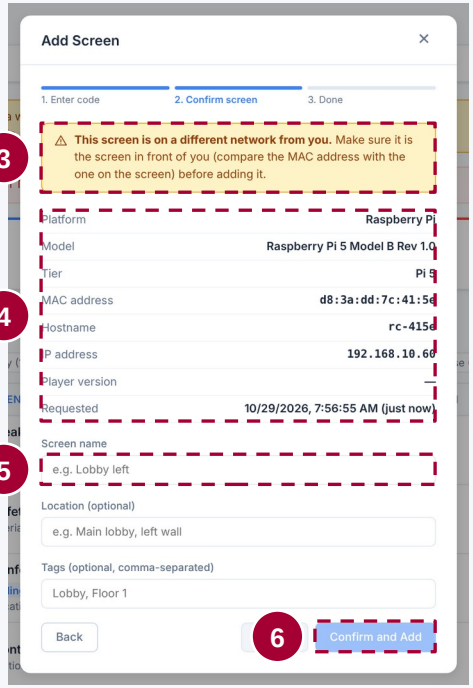

- The app waits on this page until the TV is added in the dashboard (next page). No key is needed on the TV.
- Write down the code shown on the TV, then go to the browser (5-4).
- If the server can't be reached while waiting, the app shows the message page (6-4) and retries by itself.

5. Main Page Description

4. Add the TV in the dashboard (web browser on a PC or phone)

Step 1

Step 2

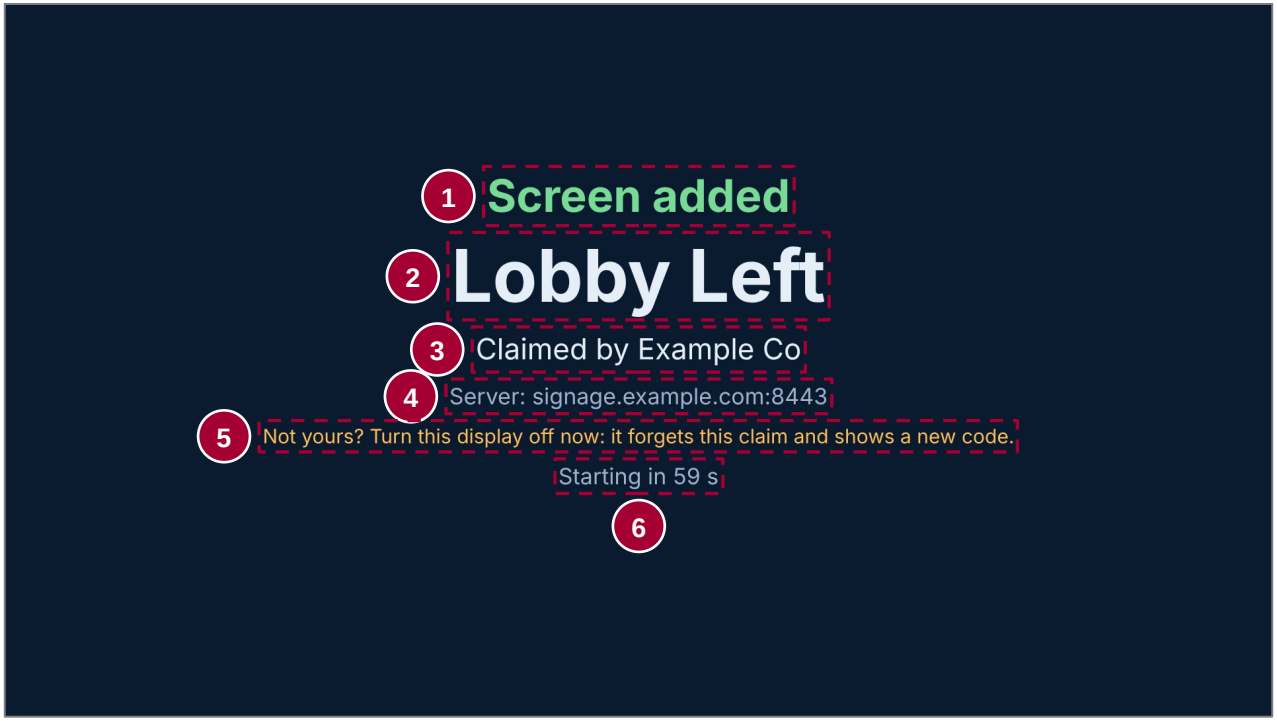

Description	
1	After signing in (section 4): Screens → “+ Add Screen”. Type the code shown on the TV (5-3)
2	“Look Up”: finds the TV
3	Notice when the browser is on another network than the TV (expected during QA): confirm anyway
4	The TV's details: platform LG webOS TV, its model and address
5	Give the screen a name (for example “LG QA 1”)
6	“Confirm and Add”: the TV switches to “Screen added” (5-5) within a few seconds

Detailed Information

- This step is done in the signage server's dashboard at https://signage.netringtech.com, not on the TV.
- The pictures come from a demo server; the example in step 2 is a Raspberry Pi screen. For the LG TV under test, step 2 shows “LG webOS TV” and the TV's model.
- The test server gives a new screen sample content, so the TV starts playing as soon as it has been added.

5. Main Page Description

5. Screen added

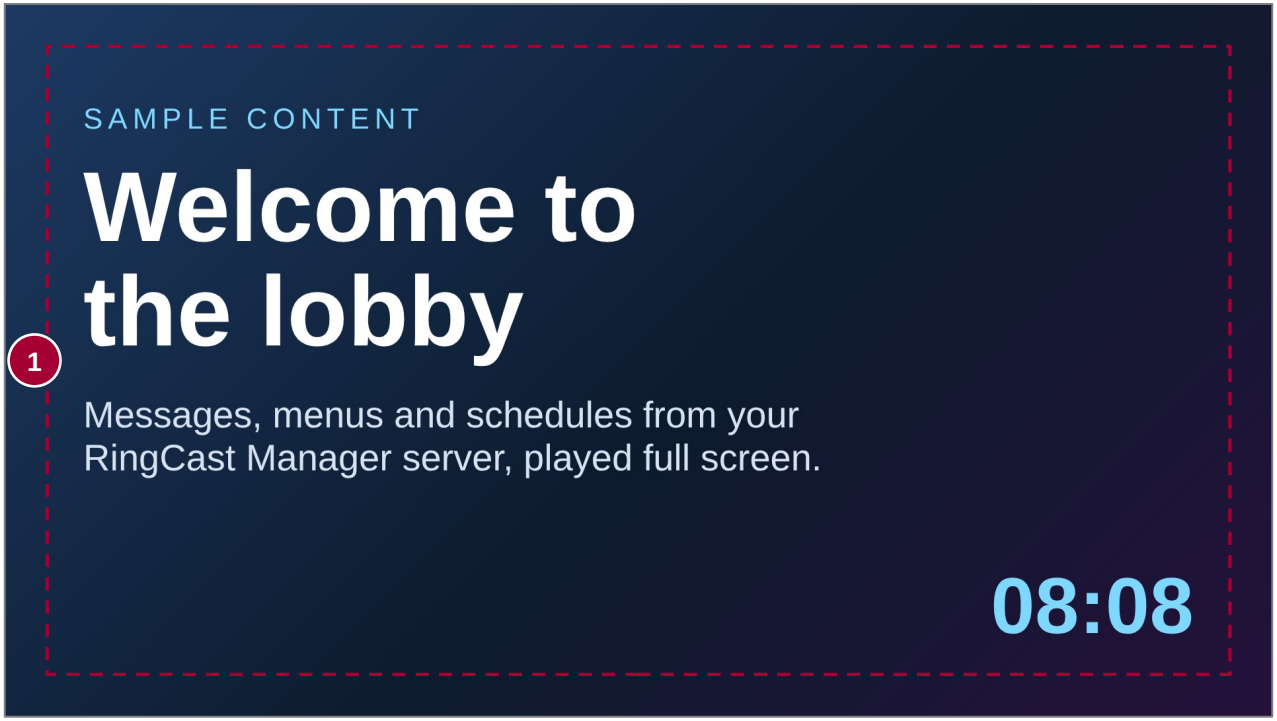

Description	
1	“Screen added”: the TV was added in the dashboard
2	The name given in the dashboard
3	The account that added it
4	The server
5	If this TV was added by mistake: turn it off now, it forgets the pairing and shows a new code
6	Countdown (60 s), then the main page plays (5-6)
Keys	
–	No key needed. BACK leaves the app

Detailed Information

- Shown for 60 seconds after the TV was added, so the person at the TV can check that it is the right screen.
- After the countdown the app plays the server's content (next page). From then on, every start of the app goes straight to that page.

5. Main Page Description

6. Main Page: playing (full screen)

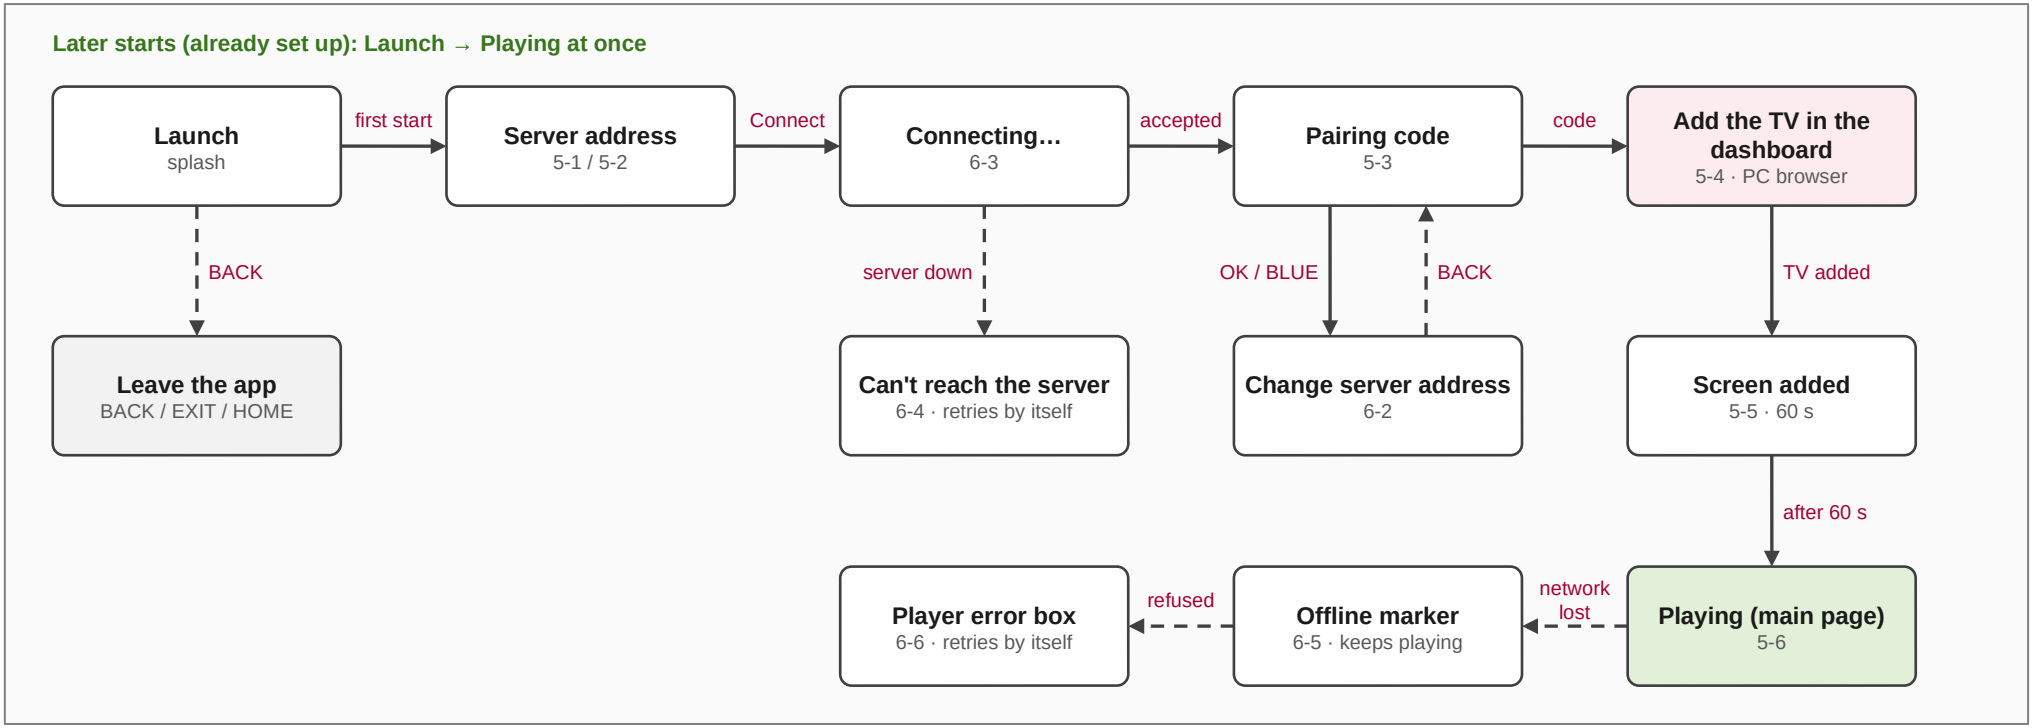

Description	
1	Content from the signage server, full screen (here: sample content). It changes as the server's schedule says
Keys	
BACK	Leaves the app (webOS shows the previous app or Home). Starting the app again plays at once
EXIT / HOME	Handled by webOS
Pointer, OK, arrows	Nothing: the content is not interactive and there are no controls on this page

Detailed Information

- This is the app's main page once set up. There are no menus or buttons on it: the TV is a signage screen.
- What plays is chosen in the dashboard (Screens → the TV → Assign Content); a change reaches the TV within about 30 seconds.
- Power off/on or unplugging the TV keeps the set-up: the next start of the app plays at once. If the network drops, the content keeps playing (6-5).

6. Sub Page Description

1. Flow Chart

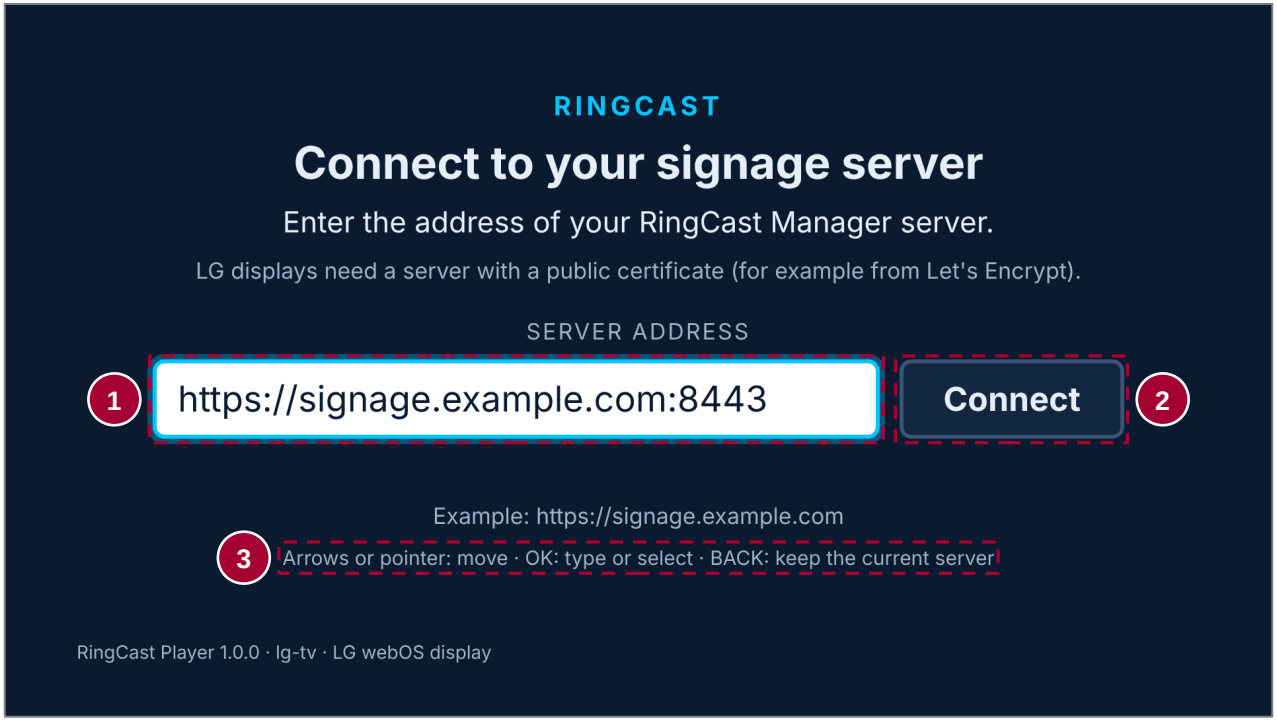

Detailed Information

- First start: Launch → Server address → Connecting → Pairing code. The TV is then added in the dashboard (browser), the TV shows “Screen added” for 60 s and starts playing.
- Later starts: straight to Playing (or to the pairing code if the TV hasn't been added yet).
- From the pairing code, OK or BLUE opens “Change server address” and BACK returns. When the server can't be reached the app shows a message and retries by itself; while playing it keeps playing with an “Offline” marker.

**Note: the dashed arrows are automatic or optional paths.*

6. Sub Page Description

2. Change the server address (from the pairing code page)

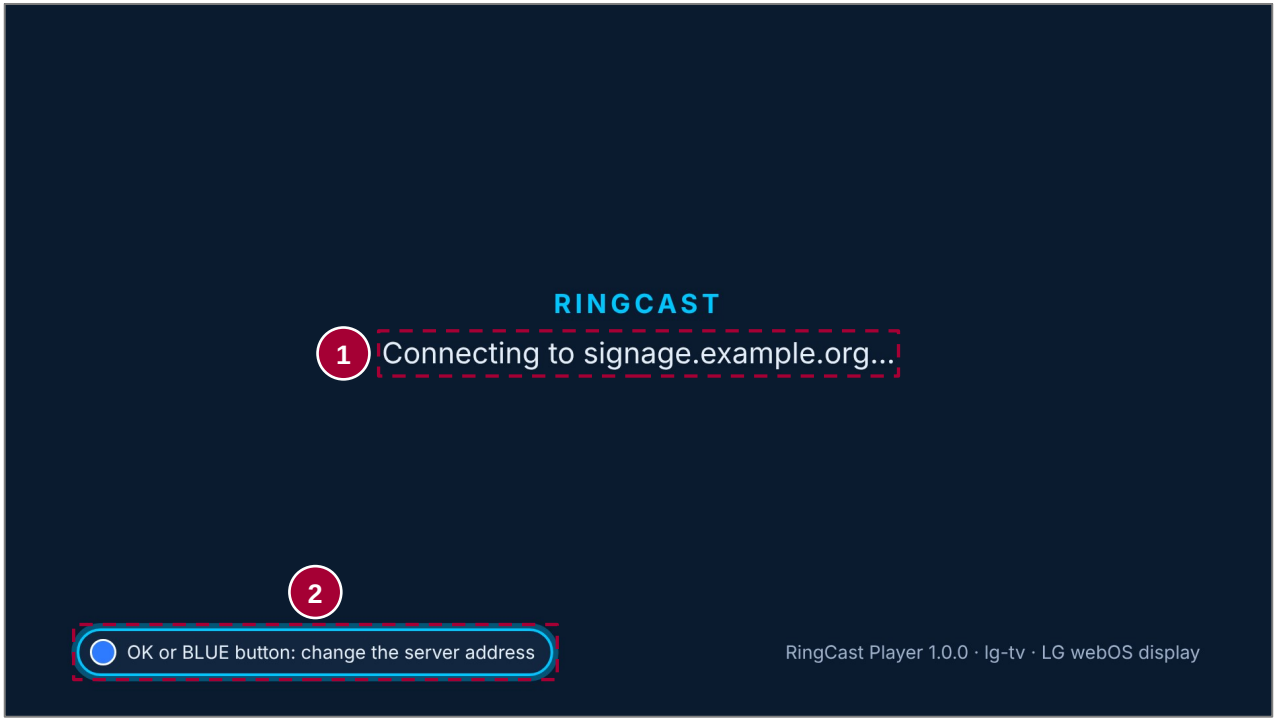

Description	
1	The current server address, pre-filled
2	“Connect”: use the new address (a new pairing code is shown)
3	Key hint: BACK keeps the current server
Keys	
OK / Arrows	As on 5-1
BACK	Back to the pairing code page (5-3); the server is kept

Detailed Information

- Opened from the pairing code page (5-3) or the message page (6-4) with OK or BLUE, or by pointing at the button and pressing OK.
- BACK returns to the page it came from without changing anything. Connect with a new address replaces the server and shows a new pairing code.

6. Sub Page Description

3. Connecting

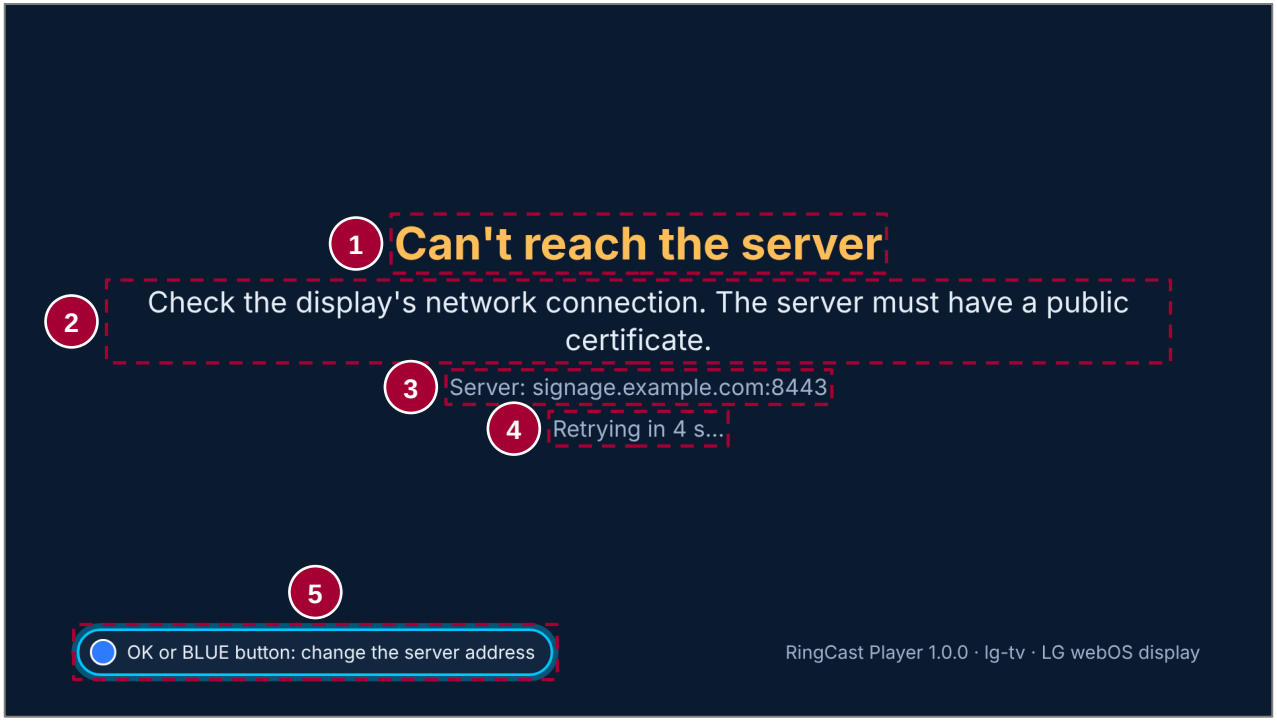

Description	
1	“Connecting to <server>…”: the address is being checked
2	Button “change the server address” (OK or BLUE): opens 6-2
Keys	
OK / BLUE	Change the server address
BACK	Leaves the app

Detailed Information

- Shown for a moment after Connect (5-1), and at start while the saved server is contacted.
- If the server doesn't answer within about 30 seconds the app explains why (5-2 or 6-4). The app never stays on this page.

6. Sub Page Description

4. Message: the server can't be reached

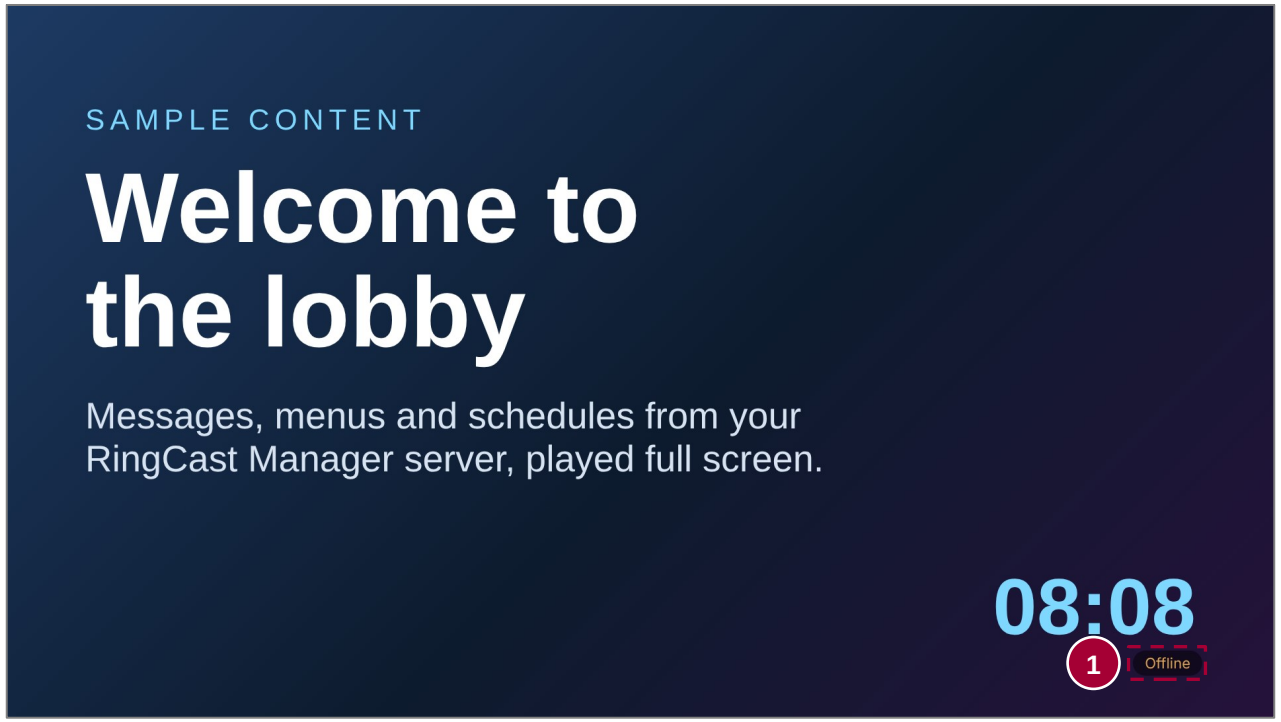

Description	
1	What happened (here: “Can't reach the server”)
2	What to check
3	The server
4	Retry countdown: the app retries by itself (5 s at first, up to 5 minutes)
5	Button “change the server address” (OK or BLUE): opens 6-2
Keys	
OK / BLUE	Change the server address
BACK	Leaves the app

Detailed Information

- Shown during set-up when the server can't be reached or refuses (other titles: server error, server busy, server needs updating, refused).
- To see it: unplug the network cable (or turn off Wi-Fi) before the TV has been added, then start the app. Reconnect the network: the app continues by itself.

6. Sub Page Description

5. Network lost while playing: “Offline” marker

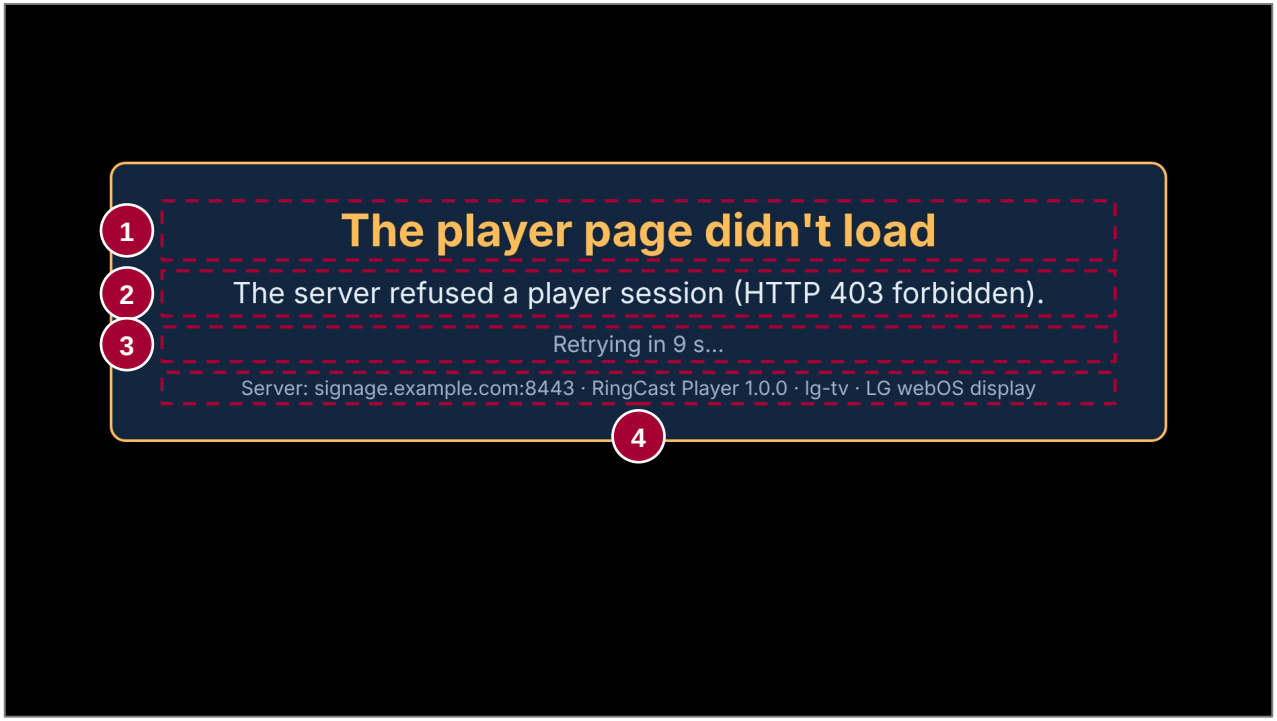

Description	
1	“Offline” marker (bottom right, inside the safe area) while the server can't be reached
Keys	
BACK	Leaves the app (as on 5-6)

Detailed Information

- The content keeps playing from the copy the app keeps; the marker shows that the server can't be reached right now.
- To test it: while playing, unplug the network cable or turn off Wi-Fi. Reconnect: the marker goes away within about 30 seconds, without any key.

6. Sub Page Description

6. Player error box

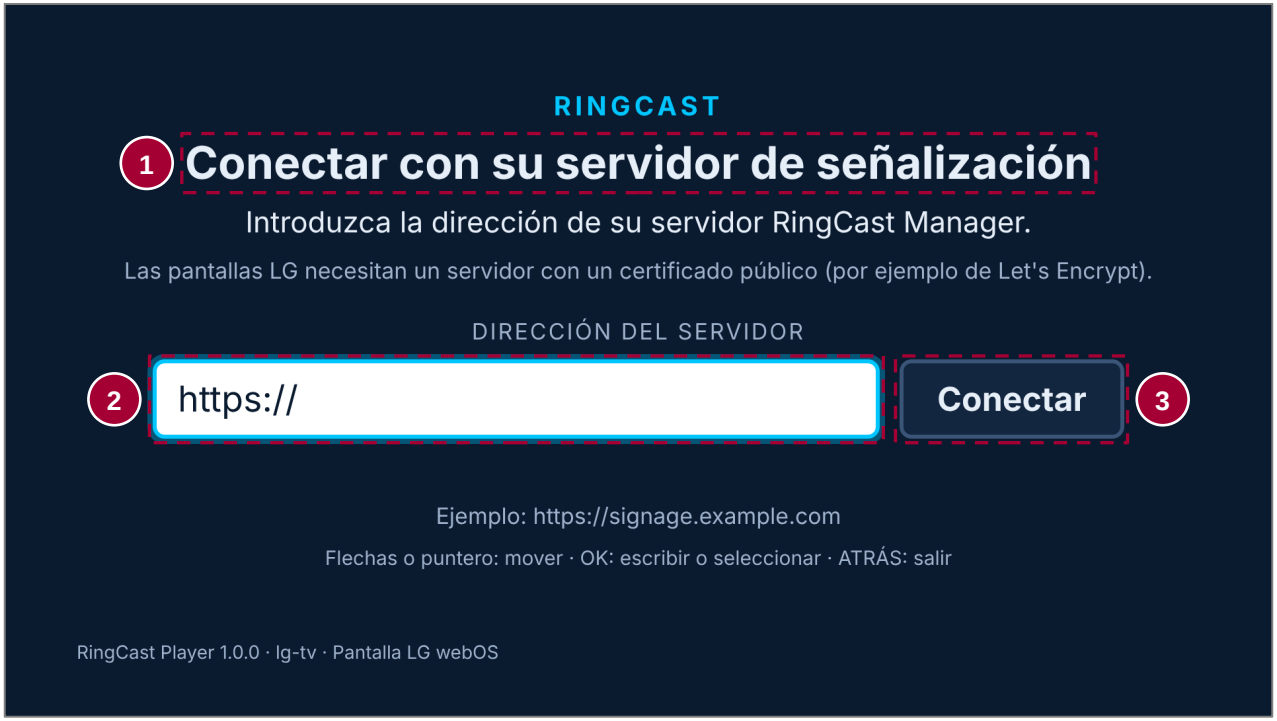

Description	
1	“The player page didn't load”
2	The reason (here: the server refused the player session)
3	Retry countdown: the app retries by itself
4	Server, app version and platform (to report a problem)
Keys	
BACK	Leaves the app

Detailed Information

- Shown over the main page when the server can't give the TV its content right now (for example the server refused or couldn't start the player). It goes away by itself as soon as the server answers.
- If the TV was removed in the dashboard, the app returns to a new pairing code (5-3).

6. Sub Page Description

7. Spanish (the app follows the TV's language)

Description	
1	Page title in Spanish: “Conectar con su servidor de señalización”
2	Server address field (“Dirección del servidor”)
3	“Conectar” (Connect)
Keys	
All	As in English (5-1)

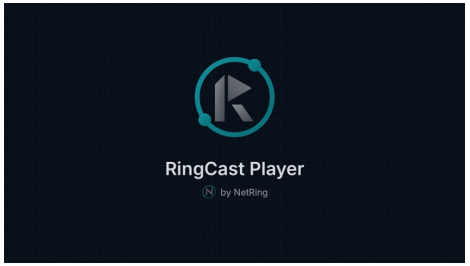

Detailed Information

- When the TV's language is Spanish (Settings → General → Language), every page of the app is in Spanish. Any other language shows English.
- The pages and keys are the same in both languages; only the text changes.

7. Paid Content

Not Applicable

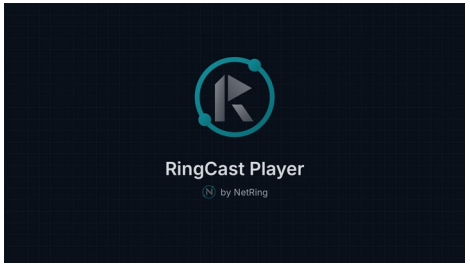

The app has no paid content, purchases, subscriptions or payment of any kind, inside or outside the app.

8. In-App Ad

Not Applicable

The app shows no advertising (no banner or video ads). It only shows the content the TV's own organisation puts on its signage server.

[Appendix] Test procedure

Where	Step	What to do
On the TV	**1**	Start RingCast Player. After the splash, “Connect to your signage server” appears with the address field focused (5-1).
	2	OK opens the keyboard. Make the field read https://signage.netringtech.com, select “Done”, then OK on Connect.
	3	The TV shows a pairing code, for example HXRT-2B99 (5-3).
In a browser (PC or phone)	**4**	Open https://signage.netringtech.com and sign in with the test account (section 4).
	5	Screens → “+ Add Screen”, type the code from the TV, Look Up, give the screen a name, “Confirm and Add” (5-4).
On the TV	**6**	“Screen added” appears (5-5); after the 60 s countdown the sample content plays full screen (5-6).
Things to try	**7**	BACK while playing leaves the app; starting it again plays at once. Pairing code page: OK or BLUE → change server, BACK returns (6-2). Power off/on: still set up. Network unplugged while playing: content keeps playing with “Offline” (6-5). Wrong address: refused with the reason (5-2).
Start over	**8**	Dashboard: Screens → the TV's “Commands” menu → “Remove screen”, type the word asked for. The TV shows a new pairing code by itself.

The test server stays online 24 hours a day during the review. Questions: **support@netringtech.com**

[Appendix] Remote keys on every page

Key	Server address (5-1, 5-2, 6-2)	Connecting, pairing code, message (6-3, 5-3, 6-4)	Screen added (5-5)	Playing (5-6, 6-5, 6-6)
Magic Remote pointer	The control under the pointer gets the focus; OK clicks it	Same	–	Nothing (no controls)
Arrows	Move between the field and Connect	–	–	Nothing
OK	Field: on-screen keyboard. Connect: connect	Change the server address (6-2)	–	Nothing
BACK	First start: leave the app. Opened from 5-3/6-4: back there, server kept	Leave the app	Leave the app	Leave the app
BLUE	–	Change the server address (6-2)	–	–
RED, GREEN, YELLOW, numbers, INFO	Nothing	Nothing	Nothing	Nothing
EXIT / HOME	Handled by webOS	Handled by webOS	Handled by webOS	Handled by webOS
Volume, mute, channel	Handled by the TV	Handled by the TV	Handled by the TV	Handled by the TV
On-screen keyboard	“Done” closes it and focuses Connect; BACK only closes the keyboard	–	–	–

Leaving the app keeps its set-up. On a TV used as a signage screen, the organisation's server can bring the app back to the front through LG Connect Apps when it is set up to (“TV control” in the dashboard); on the test TV nothing does that, so the app stays in the background until it is opened again. The app itself never starts on its own.
